

Fulldome adventures in 2013: Personal domes, video capture and visualisation.

Paul Bourke
iVEC @ UWA

Contents: Filming - Installations - Projects

Filming: Red Scarlet, Red Epic and fisheye lens

- APS-C sensor.
- Trick is matching fisheye image size to sensor size.
- Tested (most) circular fisheye lens with Canon mounts
 - Sigma 4.5mm
 - Sigma 8mm
 - Sunex 5.6mm
 - Canon 8-15mm
 - Coastal Optics 4.88mm
- Use lens offset for iKnife footage. see later.

Coastal Optics
2800 pixel fisheye, 30fps

Offset fisheye

Filming: LadyBug-3 and 5

- Full spherical capture.
- Can extract any fisheye - extremely powerful capability for repurposing for different orientated domes.
- Used the LadyBug-3 for Dark, 2700 pixel circle but high compression artefacts.
- LadyBug-5 is 8000x4000, creates 4000 pixel circle with much lower compression and higher dynamic range.
- See examples later.

Installations: John Curtin Gallery

- Exciting visualisation laboratory at Curtin University.
- Consists of
 - 2 wall immersive stereoscopic display.
 - 1/2 cylindrical stereoscopic display
 - 4x3 HD tiled panel display
 - 4m diameter dome, iDome orientation
- Dome powered by Projection Design 2560x1600 F35 projector and Elumentai lens. Provides a 2560 pixel fisheye.
- Viewer stands flush with the front face of dome.
- Requires fisheye warping, as does any off axis fisheye installation.

Installations: CityU

- Innovation campus, City University Hong Kong.
- Standard installation: information screen (right) and 6DOF Space Mouse for navigation (in front of dome).
- Viewer stands flush with the front face of the dome.
- Mostly interactive spherical panorama movies. One can look around while the movie plays.

Earth Oceans

Installations:WISH

- WISH: World Innovation Summit on Health
- Hosted in Doha, Qatar.
- Funded by the Qatar Foundation.
- <http://www.wish-qatar.org>
- iKnife and immersive remote surgery.

Installations: Edith Cowan University

- Teacher evaluation / training.
- Record from the centre of a classroom using the LadyBug-3 camera.
- Nothing is hidden.
- Report real sense of “being there”.
- More nature to spin around vs flip between externally located cameras.
- Analyse, annotate and study footage in the iDome.

Oculus rift viewing

Projects: Ngintaka

- Telling story of Ngintaka.
- Occurs across the landscape, 5 hours drive from Ulara.
- Captured high definition spherical panoramas.
- Captured gigapixel images.
- Captured 360 video from cave: the belly of Ngintaka.

The cave

Projects: Beacon Island

- Site of the Batavia shipwreck 1629.
- ~50km off the coast of Geraldton, WA.
- Due in some part to mutineers sailing further south.
- 322 washed upon the Island.
- Bad stuff happened

- Creating virtual environment of the Island.
- In collaboration with WA Maritime Museum.
- Will experience in multiple displays technologies: stereo3D, HMD, multiple walls and dome.
- Based upon Unity3D game engine.

- Captured 100+ 360x180 bubbles from across the Island.
- Have a full digital elevation map.
- Measured all buildings ... have been modelled.
- Captured 360x180 bubbles from the interior of every room in every building.

In progress ...

- All buildings and bubbles in Unity3D.
- Interact on screen, web, OculusRift, and iDome.

Project: Sydney - Kormoran

- Encounter between HMAS Sydney and German raider.
- All lives (645) from the Sydney were lost.
- Ships currently under 2.5km of water off the coast of Geraldton, WA.
- Wrecks found in 2008 ... the plan is to return and reconstruct ship using photogrammetry.

Projects: Mah Meri

- In collaboration with the University of Malaya.
- Remote tribe in West Malaysia.
- Capture 360 video of a particular healing ritual.
- Wise women dreams the spirit form
 - Carver produces the mask
 - Ceremony performed
 - Mask disposed of in river
 -
- Exhibition in Kuala Lumpur at the end of 2013.
